SAFETY SOLUTIONS™

Lockout Padlocks & Devices

OSHA Compliance Made Simple

Master Lock offers a complete line of Safety Lockout Tagout (LOTO) products to complement our full range of safety padlocks.

OSHA created Standard 29 CFR 1910.147 *The Control of Hazardous Energy* in order to establish lockout tagout compliance requirements for general industry. In response, Master Lock offers fully customized OSHA compliant safety lockout systems designed to protect workers from injury or death.

Key features include:

Durability: Master Lock safety products are exposed to rigorous temperature, chemical and weather testing to ensure they can withstand environmental conditions within any industry.

Key Charting: Complimentary service records all key codes distributed to a customer to ensure they aren't duplicated within a facility. Supports the "one lock, one key per employee" industry mantra.

Restricted Safety Keyways: Key duplicates can't be created in the field and unknowingly introduced to a padlock system. Keys are also stamped "Do Not Duplicate."

Custom Keying Options: Padlock systems can be custom keyed to adhere to the lockout program for each facility: keyed different, keyed alike, master keyed, grand master keyed, great grand master keyed.

KEYED DIFFERENT

KEYED ALIKE

MASTER KEYED

Laser Engraving/Stamping: Add permanent identification to padlocks and keys by adding employee name, department, key number or company logo.

Labels and Tags: Identify authorized employees as well as the type of safety lockout and maintenance being performed. Custom options available.

Industries can rely on Master Lock Safety Solutions for a wide variety of OSHA compliant LOTO padlocks and devices that effectively meet the demands and conditions where lockout is performed.

Per 29 CFR 1910.147, OSHA Requires LOTO Padlocks and Devices to be:

DURABLE:

Withstands environment where used

SUBSTANTIAL:

Prevents removal without use of excessive force

STANDARDIZED:

Standardize within facility by shape, color or size

IDENTIFIABLE:

Clearly identifies the employee who installed the lockout device

SINGULARY IDENTIFIED:

Used exclusively for LOTO.
Must not be used for security purposes

Master Lock Safety Solutions are compliant with these requirements

Raising The Safety Standard

This selection of Master Lock Safety products represent items particularly suited for **lockout** during maintenance at **any facility**.

SAFETY PADLOCKS

- **Durable** anodized or powder coated aluminum and thermoplastic models withstand chemicals, temperature extremes
- **Substantial** locking mechanisms and product designs prevent accidental removal
- Enhanced employee **identification** with write-on and photo ID labels or permanent laser engraving
- Multiple colors and shapes allow a site to **standardize** padlocks specific to Lockout/Tagout
- Exclusive-to-Safety cylinders maintain safety system integrity

SAFETY LOCKOUT HASPS

- **Durable** steel construction
- Pry resistant jaws prevent removal without excessive force

SAFETY TAGS AND SIGNS

- Clearly present safety messages to employees and visitors
- Guardian Extreme™ models are made with **durable** polypropylene that holds up to UV, temperature extremes and abrasive materials
- Photo ID tags provide immediate **identification** of employees
- Metal Detectable Tag option available
- Custom options available

VALVE LOCKOUT DEVICES

S3920 S3068 484

- Butterfly, ball and gate valve lockout devices cover and effectively isolate handles in the off position
- **Substantial** designs resist unauthorized removal attempts
- Write-on labels **identify** authorized worker performing lockout

ELECTRICAL LOCKOUT DEVICES

487 491B 493B

- **Durable** materials and **substantial** designs resist unauthorized removal and prevent accidental re-activation:
 - Circuit breaker lockout devices clamp on toggles in off position
 - Plug and hose covers rotate to conceal ends
- Write-on labels **identify** worker performing lockout

GROUP & MULTIPOINT LOCKOUTS

503RED 498A S806

- Group lock boxes with **durable** steel construction
- Exclusive Latch Tight™ design prevents access to stored keys
- Cable lockout with cinch mechanism ensures a tight fit, preventing accidental re-activation
- Write-on labels **identify** authorized worker performing lockout

PADLOCK STATIONS

1483BP1106 S1518

- Store **standardized** lockout padlocks in a centralized location for worker access during maintenance procedures
- **Durable** polypropylene or steel construction withstands harsh conditions

SECURITY SOLUTIONS™

Perimeter and Property Security

This selection of American Lock® and Master Lock® products are suited for any industry.

Tough Environment Padlocks

Reliable operation in extreme conditions. Special cylinders, shackle seals and keyway covers protect locking mechanisms from dirt, grit, and grime.

High Security Padlocks

Heavy duty steel bodies, shackle shrouds and boron shackles withstand abuse.

General Security Padlocks

Compact lock bodies, hardened steel shackles and non-rekeyable cylinders provide reliable security.

Custom Keying

Keyed Different
Each lock is opened by its own unique key

Keyed Alike
All locks in the set are opened by the same key

Master Keyed
A master key opens all the locks in the system, but each lock has its unique key

Edge® Key Control

This patented system provides affordable key control, eliminating the risk of unauthorized key duplication.

Custom Marking

Whether you want a name, logo, or key number, identify with laser engraving.
